

Junior Software Developer (New Graduate Opportunity)

LibreMD is a Manitoba-based medical software company developing electronic medical record (EMR) solutions used by healthcare providers across Manitoba. We are looking for a motivated and enthusiastic recent graduate or graduating student to join our development team.

This is a full-time remote position. A company computer, development software, comprehensive benefits package, and pension plan are provided.

What You'll Do

- Develop and maintain features for our web-based medical software.
- Write clean, maintainable PHP and JavaScript code.
- Work with MySQL/MariaDB databases.
- Design and integrate secure APIs and backend services.
- Build client/server interactions using AJAX and HTTP-based services.
- Collaborate with senior developers using Git and GitLab.
- Troubleshoot, test, and improve existing applications.
- As your experience grows, participate in client meetings and communicate technical concepts clearly with healthcare professionals and colleagues.

Required Skills

- Working knowledge of PHP 8
- JavaScript, jQuery, and HTML
- SQL and relational database concepts (MySQL/MariaDB)
- Basic Linux command-line skills and file system navigation (AlmaLinux or similar)
- Git version control
- Understanding of secure web application and API development
- Excellent written and spoken English communication skills
- Ability to communicate professionally with clients, both in writing and in meetings
- Strong analytical and problem-solving skills
- Attention to detail, a willingness to learn, and an excellent work ethic

Nice to Have

- Experience working with Large Language Models (LLMs) or AI integrations
- Exposure to HL7 or XML-based healthcare data standards

Who We're Looking For

This opportunity is intended for recent graduates or students completing a Computer Science degree who are ready to begin their software development career.

We are looking for someone who enjoys solving problems, takes pride in writing quality code, and is eager to learn from an experienced development team. While this role is primarily focused on software development, you will occasionally participate in meetings with healthcare professionals to discuss requirements, provide technical input, and help shape new features. As such, clear, professional written and verbal communication is essential.

Preference will be given to candidates residing in Manitoba.

This position is being recruited directly through the Universities and Colleges in Manitoba and is not being advertised through public job boards.
